## Engaging training that encourages learning.

When you choose online training for your people, you have an expectation for the quality of the learning experience. You know training needs to be engaging. You want your people to be motivated to learn.

We've developed a learning system that users embrace, and we think you'll agree.

**An incredibly rich catalog.** More than 400 unique titles tailored specifically to a manufacturing audience offer enriched training for machining, fabricating, assembly, and maintenance professionals.

**Objective, accurate testing.** Randomized multiple-choice pretests and final exams ensure users retain crucial information and target any missed topics for follow-up.

**Realistic CNC simulators and scenarios.** Flash-based CNC simulators let users step through common operator tasks, and interactive "labs" offer real-world scenarios for applying knowledge.

**Interactive vocabulary.** Bolded terms within the training text produce manufacturing-specific definitions to build terminology.

**Audio and video enhancements.** Key training subjects include video in order to communicate visual information, and every class contains audio for users who prefer assistance with written text.
