

Educational Institutions

TODAY'S STUDENTS DEMAND A NEW TYPE OF TRAINING.

They are not impressed by textbooks. They want to be engaged and challenged.

Tooling U has developed a curriculum of manufacturing theory that will help you:

- ◆ Increase enrollment.
- ◆ Engage students.
- ◆ Increase time for hands-on instruction.
- ◆ Involve students of various skill levels.
- ◆ Exceed academic standards and competency requirements.

Curriculum

Tooling U provides educators, high schools and technical colleges with a training alternative that is engaging for students and a perfect complement to hands-on instruction. Tooling U content can be mapped to meet state education standards as well as nationally recognized industry standards.

Administrators

The Tooling U Administration Center offers advanced tools to set both online and offline competencies, design curriculums, customize content and view the progress of both individuals and groups.

Students

Self-paced classes engage students by incorporating various multimedia presentations into the text of the class. Audio voiceovers read the text within each class to improve the learning retention of students.

Mobility

Tooling U classes are online, which means classes can be taken in the classroom or at home. Recently, Tooling U launched a mobile feature, which will allow users to check progress or take a test on their mobile device.

Discover a better way to reach your students. Help them gain the **confidence to compete**.

"I was surprised by how thorough the training is. I've been a machinist for 25 years, and the training includes a number of tips and tricks that I've picked up over the years from doing the job. I didn't expect that from online training."

Dave Laubert, R G Drage Career Center
